

# RC DRILL PIPE CAROUSEL

## SAFE AND EFFICIENT PIPE MANAGEMENT

Designed and manufactured by Hardwick, our carousel is engineered for use with sliding angle-type mast, utilizing dual tube, reverse circulation, external flush drill pipe. Positioned safely away from the operator, the hydraulically operated carousel mounts on the right-hand side of the mast, opposite the operator.

Drill pipes are saddled in spring loaded sockets while they are simultaneously retained and centered by a unique assembly at the head of the carousel. Hands-free loading and unloading is managed with a simple, two-lever hydraulic control. The first actuator positions the carousel in and out of the mast and the second actuator controls the lock pin and bi-directional motor rotation.

You can rely on Hardwick as a drilling partner.

### Drill Pipe Sizes

- 4" Matrix (8 or 12 Rod)
- 4-1/2" Matrix (12 Rod)

### Drill Rod Length Capacity

- 6 Meter
- 20 Foot

### SAFE

Drill pipes are added and removed from the top head without manual assistance. The system reduces the frequency drillers and helpers are exposed to strain and injuries.

### RELIABLE

Purpose-built for RC drilling, the Hardwick carousel is designed for the rigors of life in the field. Expect easy integration and straightforward maintenance.

### EFFICIENT

Drill operators will quickly grow to appreciate the time savings provided by our carousel. Shave hours off loading and tripping.
